

Entertainment and Life Safety Audio for Hala Widowiskowo-Sportowa

Complete refurbishment of Hala Widowiskowo-Sportowa has delivered the city of Dąbrowa Górnicza in southern Poland with a world class multi-purpose sports complex. The venue serves the region for sports and it also provides a significant arena for commercial and cultural events and entertainment.

The central sports and entertainment hall of Hala Widowiskowo-Sportowa has a spectator capacity of three thousand. The choice of loudspeakers was critical with the system being used for commentary, events and life safety.

R SERIES R2's were chosen for their overall audio quality, with their high directivity ($Q > 37$) a critical factor for maintaining speech intelligibility in the difficult acoustic conditions. A combination of eleven R2-94, six R2-77 and three R2-52 loudspeakers provided the dispersion patterns needed for optimum coverage throughout the audience.

For extended low frequency power and impact, the R SERIES are complemented by four I SERIES **IS6-215** dual 15-inch subwoofers which are switched off during activation of the system for life safety.

Abilene Civic Center Gets Major Upgrade

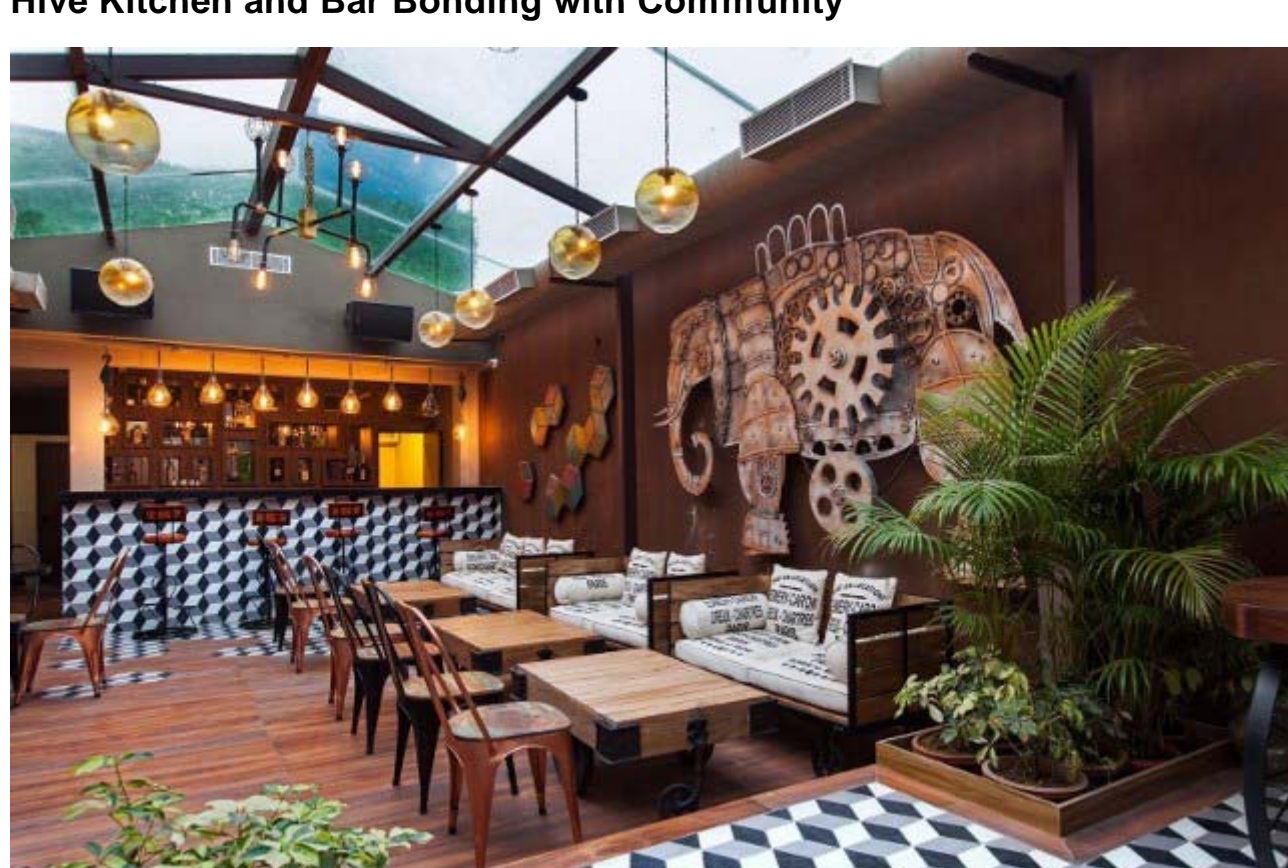

Originally constructed in the late 1960s, the Abilene Civic Center in Texas is a spacious, multi-purpose venue with a live performance theater, an exhibit hall and a large conference center that can be subdivided to accommodate as many as four simultaneous events.

In part because of its age, the conference center's audio system did not meet the voice intelligibility or audio quality expectations of its many events, especially those that involved modern presentations or musical performances.

The city wanted a system that would provide both highly intelligible voice reinforcement and high-quality music production. A new system was designed and installed in 2015 with seventy-eight **D SERIES** model D8 two-way coaxial ceiling loudspeakers.

The system provided clear announcements and high quality music for a banquet celebrating Martin Luther King's birthday on January 18th, 2016.

Hive Kitchen and Bar Bonding with Community

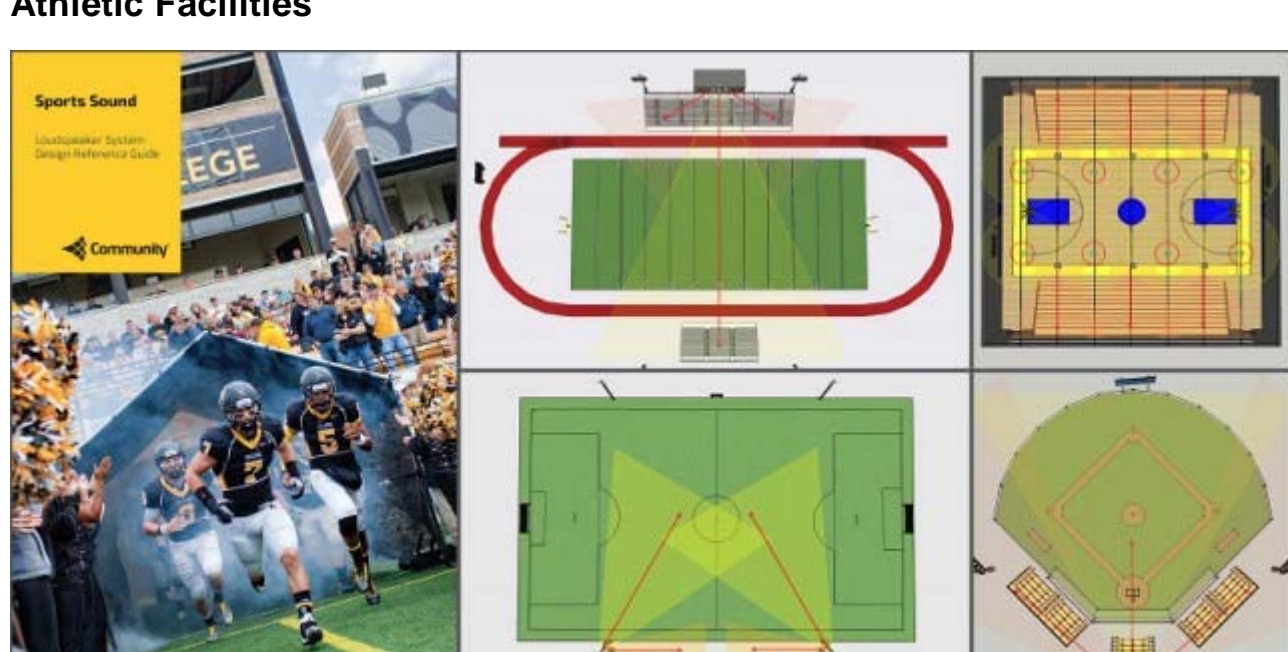

The Hive Kitchen & Bar in Delhi is a venue with a hexagonal beehive motif, used extensively in the decor of the restaurant to represent community bonding.

The venue actively promotes such a way of life, where people come together to enjoy a meal or a drink and network. With interior design, international cuisine and regular musical recitals and performances, it provides its diners and visitors with a unique and very sociable experience.

Great sound plays an important part in creating the atmosphere and entertainment at the Hive Kitchen & Bar this has been achieved with a system utilizing Community loudspeakers throughout, including **V SERIES** V2-1296's, V212 Subs and **C SERIES** CS8's, CS4's and C4LP's. The concept has proved successful with the venue extremely busy throughout the day and night.

Webinar - Sports Sound: Loudspeaker System Layout Options for Athletic Facilities

Thursday, May 5 at 1:00pm

Football, baseball, soccer, basketball. The Sports Sound Loudspeaker System Design Reference Guide from Community provides several R SERIES options for these standard athletic facilities, covering the typical variations in loudspeaker mounting locations found in these venues. Learn how to best utilize the Design Reference Guide to achieve your sound system performance goals quickly and efficiently. A Question & Answer session follows the webinar presentation.

InfoComm 2016 - Las Vegas, Nevada June 7 - 10, 2016

Booth 9319 / Demo Room N113

HEAR WHAT'S NEW!

Hear Community's new R SERIES R-MAX and I SERIES Compact and Weather-Resistant Models.

Demonstrations at 9:00am, 9:30am, 11:00am, 11:30am, 1:00pm, 1:30pm, 3:00pm and 3:30pm (Tuesday starting at 11:00am and Wednesday through Friday starting at 9:00am in Demo Room N113).

REGISTER [HERE](#) for your preferred demonstration time.

WIN LOUDSPEAKERS!

Enter our daily drawing for a chance to win a pair of new I SERIES Compact 6.5-inch, two-way loudspeakers. Winner's choice of indoor or outdoor version in any standard color.

ATTEND TO LEARN!

Optimizing Outdoor Sound System Performance

Thursday, June 9, 1:00pm – 2:30pm

Reviewing the various factors that affect the ability to deliver highly intelligible, broad-bandwidth audio over distance: defining achievable design goals, understanding environmental factors, and selecting the 'correct' components. Test results measuring the effect of loudspeaker directivity ('Q') upon signal-to-noise ratios, and the resulting impact on speech intelligibility, will be reviewed.

Session ID MT37 (1 renewal credit)
InfoComm Room N231
