

ArmoniaPlus System manager™ by Powersoft

IMPORTANT INFORMATION

ArmoniaPlus software requires **.NET framework 4.6** to run. If not installed on your PC, please download and install it from the Microsoft website at the following link:

<https://www.microsoft.com/en-us/download/details.aspx?id=48130>.

- If your PC has more than 1 Ethernet adapters, it is advisable to disable those not connected to the amplifiers network.
- It is not recommended to connect the amplifiers network via a general purpose LAN; make sure to create an exclusive connection between the PC and the amplifiers.
- While the ArmoniaPlus software is remotely controlling an amplifier, every change performed locally (i.e. altering the mute state via an amplifier's front panel) will be automatically reverted. ArmoniaPlus overrides any parameters set locally in a device.
- If continuous monitoring is required, remember to set the computer's power saving options accordingly to avoid it suspending or hibernating.

Minimum PC system requirements:

- **CPU:** Intel Pentium IV/Centrino compatible processor
- **RAM:** 1 GB RAM
- **Video adapter:** 128 MB dedicated RAM
- **HD:** 2.5 GB available space
- **OS:** Microsoft Windows Windows8/Windows 7/Windows 10
- **Required software:** Microsoft .Net Framework 4
- **Monitor resolution:** 1024x768, 24-bit color
- **For Ethernet connection:** Ethernet card (≥ 100 Mbit/s), or equivalent wireless equipment (≥ 54 Mbit/s) (optional)
- **For notifications per SMS:** GSM modem (optional)
- **For notifications per email:** Internet connection (optional)

Audio equipment requirements:

- Ethernet board (installed in amplifiers)
